Correct Coding Guide 2019

This reference is intended to provide the most frequent risk adjustable ICD-10-CM diagnosis codes for conditions used in the inpatient and outpatient settings. Please consider that most of the acute condition codes (designated with red type) should not be documented in the outpatient setting, but are more appropriate for the inpatient setting. It does not define a standard of care and should not substitute for an informed medical evaluation, or diagnosis and treatment performed by a licensed healthcare provider. ICD-10 alphanumeric, each diagnosis consisting of 3-7 characters

For example: I69.242 Monoplegia of lower limb following other nontraumatic intracranial hemorrhage affecting left dominant side	
*Note: Acute care, hospital inpatient codes are designated in red. Most of the codes are not appropriate to document as active/current conditions in the outpatient setting.
